

We make shadow payroll simple.

Our cloud-based shadow payroll platform simplifies the tax management of employees working internationally.

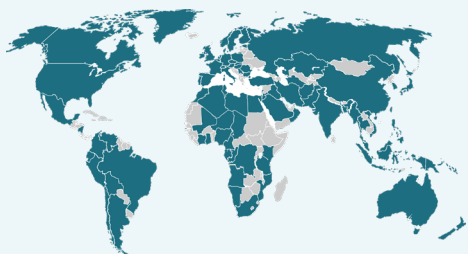

Manage shadow payroll processes with ease.

What is shadow payroll?

If you have an employee on assignment in a foreign country or a remote flexible worker, their wages may need to be reported in both the home and host countries via a **shadow payroll**.

Shadow payroll is used to calculate the appropriate tax and social security liabilities (in the host location) to be submitted to the host country authorities while the employee continues to be paid from the home country payroll.

Our shadow payroll solutions provide near-global coverage for our customers

SIEMENS

We work on a country by-country basis, so delivering a single report in the Certino system and immediately providing shadow payroll results was very advantageous to us. This combination of benefits makes Certino unique as a shadow payroll provider.

Benjamin Mueller | Senior Tax Specialist, Siemens GMS Tax

Why us?

We understand that shadow payroll can be challenging. That's why we've developed the world's first SPaaS ("Shadow Payroll as a Service") solution to help you...
